JOBPILOT AI

THE SMARTER JOB SEARCH

A free mini toolkit to improve your CV, tailor applications, and prepare for interviews with AI.

3 PRACTICAL PROMPTS • A SIMPLE WORKFLOW • REAL EXAMPLES

A useful starting point for job seekers who want clearer applications—not fake credentials or guaranteed results.

1. Use AI without losing your own voice

AI works best as a writing assistant, not as a replacement for your experience. Give it real information, ask for a clearer presentation, and check every detail before sending an application.

A simple 20-minute workflow

1	**Choose one real job ad**	Copy the job description and identify the 3–5 most important requirements.
2	**Gather your evidence**	Write down genuine skills, tasks, achievements, tools, and examples from your background.
3	**Tailor your application**	Ask AI to connect your real evidence to the job requirements—without inventing anything.
4	**Review and submit**	Check facts, dates, tone, spelling, and whether the final text still sounds like you.

The rule: never let AI invent employers, dates, degrees, certifications, responsibilities, or results. If a detail is not true, remove it.

2. Three copy-and-paste AI prompts

Prompt 1 — Tailor my CV to a job

> I will provide a job description and my current CV. Compare them and list the 5 most important requirements in the job ad. For each requirement, show which real experience or skill from my CV supports it. Identify gaps honestly. Then suggest edits that improve clarity and relevance without inventing qualifications, employers, dates, achievements, or skills. Ask me questions if information is missing.

Prompt 2 — Improve a bullet point

> Rewrite this CV bullet point in 3 clear, professional versions. Keep the meaning accurate, use a strong action verb, and focus on the task, method, or outcome only if I have supplied evidence for it. Do not add numbers or achievements that I have not confirmed. Original bullet: [paste bullet point].

Prompt 3 — Practice an interview

> Act as a supportive interviewer for this role: [job title]. Ask one question at a time. Wait for my answer, then give feedback on clarity, relevance, and specific evidence. Help me structure real examples using Situation, Task, Action, Result (STAR). Do not write a fictional story for me. If my answer lacks detail, ask a follow-up question.

3. A better answer using the STAR method

STAR helps you explain a real example clearly: Situation, Task, Action, Result. You do not need a dramatic story. A small, specific example can be effective if it is genuine.

Example structure

Situation	What was happening? Give brief context.
Task	What were you responsible for?
Action	What did you personally do? Be specific.
Result	What changed? Use a real outcome; if there is no number, do not invent one.

Practice worksheet

Situation: _____

Task: _____

Action: _____

Result: _____

4. Your next 3 steps

■ Save one version of your CV as your master copy.

■ Choose one job ad and use Prompt 1 to identify the strongest genuine matches.

■ Read the result carefully, correct anything inaccurate, and tailor the final application yourself.

Want the complete system?
The full JobPilot AI Toolkit includes a detailed job-search guide, a larger AI prompt library, ATS-friendly CV and cover-letter templates, interview and STAR workbooks, LinkedIn guidance, salary negotiation resources, and an application tracker.
